

TRICEL

ENVIRONMENTAL

Tricel Septic Tank Range

Tank capacities are designed in accordance with BS6297:1983

- other sizes are available on request

Tricel low profile septic tanks are suitable for both single houses and larger developments. All Tricel low profile septic tanks are manufactured to the highest standards and meet both BS6297:1983 and European Certification EN12566-1. Their rounded one piece design enables easy installation and causes less disruption to the surrounding environment. Larger tank sizes are available by request.

Tricel® is the registered trade name given to a range of wastewater treatment products supplied by Nicholson Plastics Ltd.

A conventional septic tank system comprises of a septic tank followed by a soil percolation area. The septic tank functions as a primary sedimentation tank, holding the wastewater long enough to allow the solids to settle and form sludge. The wastewater from the septic tank is discharged into the percolation area, which acts as a bio filter.

These systems provide effective treatment and disposal of domestic wastewater when properly sized in accordance with national codes and regulations.

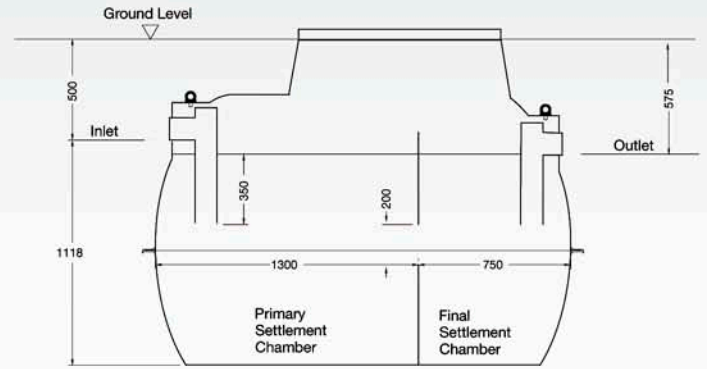

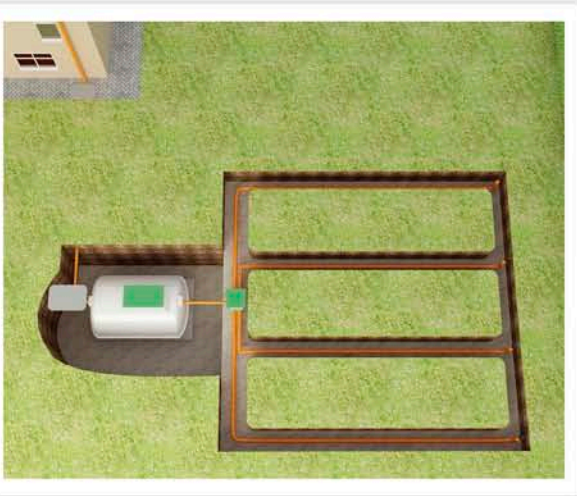

Fortis 12 Septic Tank

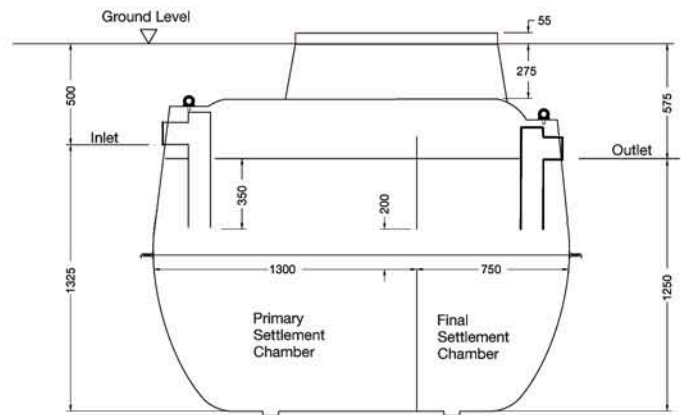

Vento 6 Septic Tank

A drainage field design is based on the soil porosity. Soil porosity is specific to each site. Ensure tests are completed to determine the number and length of trenches prior to installation. Technical advise is available from our sales department.
